# Contents

<b>Appendices</b>	<b>6</b>
<b>A Notational Conventions and Preliminaries</b>	<b>7</b>
A.1 Set notation . . . . .	7
A.2 Commutator and Anti-commutator . . . . .	7
A.3 Group Theory References . . . . .	8
A.4 Group . . . . .	8
A.5 Group Representation . . . . .	9
A.6 Dimensions . . . . .	10
A.7 Vector Space and Algebra Over a Field $\mathbb{F}$ . . . . .	11
A.8 Tensors . . . . .	12
A.9 Permutations . . . . .	15
<b>B Birdtracks</b>	<b>16</b>
B.1 Classical Bayesian Networks and their Instantiations . . . . .	16
B.2 Quantum Bayesian Networks and their Instantiations . . . . .	18
B.3 Birdtracks . . . . .	19
<b>C Clebsch-Gordan Series Tables</b>	<b>24</b>
<b>1 Casimir Operators</b>	<b>27</b>
1.1 Independent Casimirs of Simple Lie Groups . . . . .	28
1.2 Casimir Matrix Expressed in Terms of $6j$ Coefficients . . . . .	32
1.3 $\text{tr}(M^2)$ and $\text{tr}(M^3)$ . . . . .	35
1.4 Dynkin Index . . . . .	36
<b>2 Characteristic Equations</b>	<b>37</b>
<b>3 Clebsch-Gordan Coefficients</b>	<b>41</b>
3.1 CB Coefficients as Matrices . . . . .	41
3.2 Generalization From Matrices to Tensors . . . . .	44
<b>4 Dynkin Diagrams</b>	<b>46</b>
4.1 Examples . . . . .	49

<b>5</b>	<b>General Relativity Nets: COMING SOON</b>	<b>47</b>
<b>6</b>	<b>Integrals over a Group</b>	<b>48</b>
6.1	$\int dg \, G$ . . . . .	49
6.2	$\int dg \, G \otimes G^\dagger$ . . . . .	49
6.3	Character Orthonormality Relation . . . . .	52
6.4	$SU(n)$ Examples . . . . .	52
6.4.1	$\int dg \, G \otimes G$ . . . . .	53
6.4.2	$\int dg \, G^\dagger \otimes G^\dagger \otimes G \otimes G$ . . . . .	53
<b>7</b>	<b>Invariant Tensors</b>	<b>56</b>
<b>8</b>	<b>Lie Algebras</b>	<b>60</b>
8.1	Generators of Infinitesimal Transformations . . . . .	60
8.2	Tensor Invariance Conditions . . . . .	62
8.3	Clebsch-Gordan Coefficients . . . . .	63
8.4	Structure Constants (3 gluon vertex) . . . . .	65
8.5	Other Forms of Lie Algebra Commutators . . . . .	68
<b>9</b>	<b>Lie Algebras of Classical Groups</b>	<b>70</b>
9.1	$SU(n)$ . . . . .	70
9.2	$SO(n)$ . . . . .	71
9.3	$Sp(n)$ . . . . .	71
<b>10</b>	<b>Orthogonal Groups</b>	<b>71</b>
10.1	$V_{def} \otimes V_{def}$ Decomposition . . . . .	74
10.2	$V_{adj} \otimes V_{def}$ Decomposition . . . . .	77
<b>11</b>	<b>Paulions and Gammions</b>	<b>83</b>
11.1	Paulions . . . . .	83
11.2	Gammions . . . . .	86
11.3	$Spin(n)_\mathbb{R}$ . . . . .	87
11.4	Representations of $Spin(n)_\mathbb{R}$ . . . . .	89
11.5	Examples . . . . .	90
<b>12</b>	<b>Quantum Shannon Information Theory: COMING SOON</b>	<b>93</b>
<b>13</b>	<b>Recoupling Identities</b>	<b>94</b>

# Chapter 4

## Dynkin Diagrams

This chapter is based on Ref.[2], section 20.4.

Lie algebra over reals (real vector space over generators  $X_r$  for  $r = 1, 2, \dots \mathcal{D}$ )  
 $\mathcal{D}$  = number of real degrees of freedom, real dimension  $\dim_{\mathbb{R}}$  of Lie Algebra

$$[X_q, X_p] = \sum_t f_{qp}{}^t X_t \quad (4.1)$$

$$g_{qs} = \sum_{p,t} f_{qp}{}^t f_{st}{}^p = \quad q \text{---} f \text{---} s \quad (4.2)$$

If  $\det g = 0$ ,

$$[X_a, X_b] = 0, \quad [X_q, X_p] = \sum_t f_{qp}{}^t X_t \quad (4.3)$$

Can assume  $\det g \neq 0$ , Cartan criterion (CC) for group to be semi-simple. If the CC is satisfied, can assume  $g_{st}$  is diagonal

$$g_{st} = \delta(s, t) = \text{---} \quad (4.4)$$

$$f_{qp}{}^t = f_{qpt} \quad (4.5)$$

Will not choose  $f_{qpt}$  to be totally antisymmetric

$$q_- = 1, 2, \dots, \mathcal{R}$$

$$\vec{\alpha} = 1, 2, \dots, \mathcal{D} - \mathcal{R}$$

$q$  = either  $q_-$  or  $\vec{\alpha}$  but not both.

Let  $\{H_{i_-}\}_{i_-=1}^{\mathcal{R}}$  be the largest possible set of mutually commuting  $X_p$ .  $\mathcal{R}$  is called the **rank** of the group.

$$\boxed{[H_{i_-}, H_{j_-}] = 0} \quad (4.6)$$

Choose  $E_{\vec{\alpha}}$  to be eigenvectors of  $H_{i_-}$  in the commutator “product”

$$\boxed{[H_{i_-}, E_{\vec{\alpha}}] = \underbrace{\alpha_{i_-}}_{f_{i_-, \vec{\alpha}, \vec{\alpha}}} E_{\vec{\alpha}}} \quad (4.7)$$

Then<sup>1</sup>

$$[H_i, [E_{\vec{\alpha}}, E_{\vec{\beta}}]] = [[H_i, E_{\vec{\alpha}}], E_{\vec{\beta}}] + [E_{\vec{\alpha}}, [H_i, E_{\vec{\beta}}]] \quad (4.8)$$

$$= (\alpha_i + \beta_i)[E_{\vec{\alpha}}, E_{\vec{\beta}}] \quad (4.9)$$

If  $\vec{\alpha} + \vec{\beta} = 0$ ,  $[H_i, [E_{\vec{\alpha}}, E_{\vec{\beta}}]] = 0$  so

$$\boxed{[E_{\vec{\alpha}}, E_{-\vec{\alpha}}] = \sum_{i_-} \underbrace{\alpha_{\vec{\alpha}, -\vec{\alpha}, i_-}^{i_-}} H_{i_-}} \quad (4.10)$$

If  $\vec{\alpha} + \vec{\beta} \neq 0$ ,

$$\boxed{[E_{\vec{\alpha}}, E_{\vec{\beta}}] = N_{\vec{\alpha}, \vec{\beta}} E_{\vec{\alpha} + \vec{\beta}} \quad \text{if } \vec{\alpha} + \vec{\beta} \neq 0} \quad (4.11)$$

$$\alpha^{i_-} = f_{\vec{\alpha}, -\vec{\alpha}, i_-} \quad (4.12)$$

Dynking Diagram (DD)

$$n = \frac{-2\vec{\alpha} \cdot \vec{\beta}}{\vec{\alpha} \cdot \vec{\alpha}} \quad (4.13)$$

$$p = \frac{-2\vec{\alpha} \cdot \vec{\beta}}{\vec{\beta} \cdot \vec{\beta}} \quad (4.14)$$

$$-\sqrt{\frac{np}{4}} = \hat{\alpha} \cdot \hat{\beta} \in [-1, 0] \quad (4.15)$$

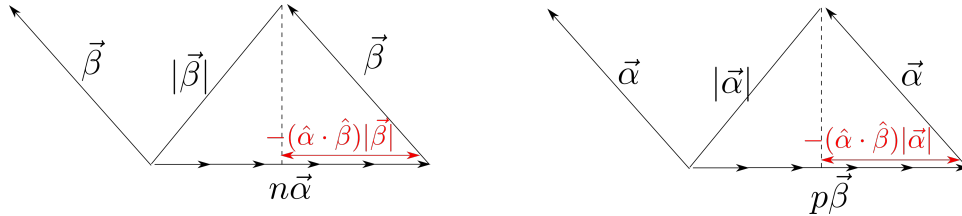

Figure 4.1: Pictorial representation of Eqs.(4.13) and (4.14).

---

<sup>1</sup>The commutator  $[x, y] = xy - yx$  acts like a derivative operator:  $[x[a, b]] = [[x, a], b] + [a, [x, b]]$

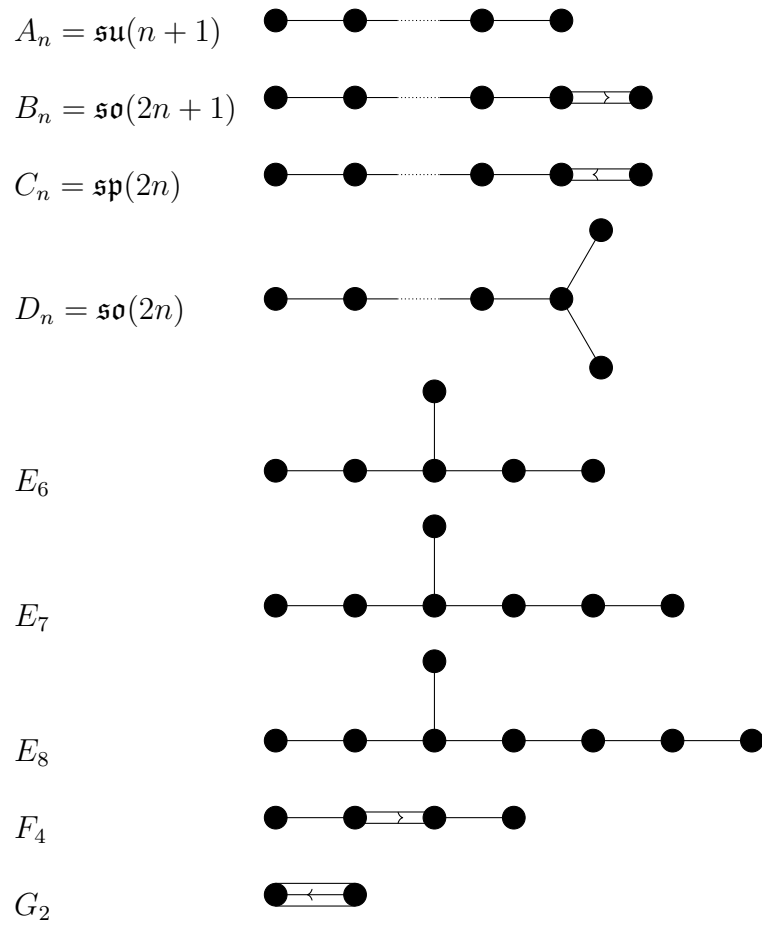

Figure 4.2: Dynkin diagrams for the simple Lie groups

$np$	$\sqrt{np/4}$	$\arccos\left(-\sqrt{np/4}\right)$
0	0	$\frac{\pi}{2} = 90^\circ$
1	$\frac{1}{2}$	$\frac{2\pi}{3} = 120^\circ$
2	$\frac{1}{\sqrt{2}}$	$\frac{3\pi}{4} = 135^\circ$
3	$\frac{\sqrt{3}}{2}$	$\frac{5\pi}{6} = 150^\circ$

Table 4.1: Possible root vector angles from Eq.(4.15).

## 4.1 Examples

- $SO(3)$  and  $SU(2)$  have a single dot DD
- $SO(4) \cong SO(3) \times SO(3)$  not a simple Lie algebra, its DD is two disconnected dots
- For  $SU(3)$

$$H_1 = T_z, \quad H_2 = \frac{\sqrt{3}}{2}Y \quad (4.16)$$

$$E_{\vec{\alpha}} = \frac{1}{\sqrt{2}}T_+, \quad E_{\vec{\beta}} = \frac{1}{\sqrt{2}}U_+, \quad E_{\vec{\alpha}+\vec{\beta}} = \frac{1}{\sqrt{2}}V_- \quad (4.17)$$

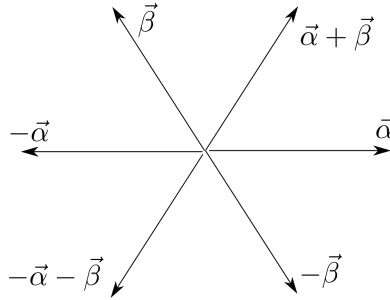

Figure 4.3: Root system for  $SU(3)$
